Transform
the patient experience

EcoAI with **Apple**® & **Android**™
by NXTSTIM

Personalized Therapy & Monitoring Suppor

EcoAI® is a therapy and monitoring system to help you and your wellness team to deliver pre- and post pain reduction experiences to qualified patients. To use EcoAI, patients must have a compatible iPhone® or Android™ Smartphone.

- The World's First FDA Approved Artificial Intelligence Machine Learning (AIML) Neuromodulation Device capable of Remote Patient Monitoring

- Encrypted messaging allows physicians and wellness teams to easily connect with patients throughout activities of daily living

- Timely, easy to follow education available in-app reduces the traditional overload of paper process

---

Your data. Your guidance. Your outcome.
EcoAI®

NXTSTIM has developed EcoAI to set a new standard in digital health utilizing our proprietary AIML technology. This digital platform uses iPhone and Android systems to create a new, first-of-its-kind, level of connection between patients and their physicians. EcoAI delivers continuous data and patient-reported feedback to facilitate care, outcomes, and satisfaction while delivering personalized neurostimulation therapy

Consistently Manage the Episode of Care

EcoAI is designed to keep patients engaged in their wellness journey, allowing patients to better understand their therapy and take an active role in optimizing their recovery experience.

- Therapy-specific protocols
- Timely education
- To-do list and reminder notifications
- Encrypted in-app messaging

Collect and Monitor Objective Data

- Platform for patient management and passive data collection through a smart phone
- Provides clinical insights to support the patient's chronic pain therapy
- Tracks patient progress through remote monitoring, 365 days post clinical engagement, and adherence

Support Patient Satisfaction

- EcoAI introduces an additional layer of connectivity with the ability to support patients outside the clinic through consistent care processes and direct messaging.
- Physicians and care teams are able to identify patients that require additional instructions while also providing encouragement.
- Minimizes in-person touch points through patient community, video, text and picture messaging

---

Differentiates Surgical Practice

- Builds brand equity through use of latest technology to assess patient outcomes and satisfaction
- Enhanced communication aims to maximize patient participation and support their recovery process
- Supports patients outside of the chronic pain event to help reduce variability of care and minimize unnecessary office visits.
